- Formatted for Customers existing cost recovery file format.

- Run Import or Export process from a desktop link

- Run as scheduled task

Form and Postal Utilities Cost Recovery Connector for MailOne™ software automates the recovery of office mailing expenses by constantly synchronizing account and postage data between the FP postage meter MailOne software and a firms cost recovery system (i.e. Copitrak, Equitrac, ProLaw...).

With MailOne and FPU Cost Recovery Connector software a firm can easily improve the efficiency and accuracy of recording and recovering client billable expenses related to their FP postage meter.

Automatically import new client matter numbers and descriptions into FP MailOne accounts The CRC Program reads in all the customers matters, deletes missing accounts and imports new ones.

Automatically export meter postage from MailOne and imports it into a cost recovery or accounting system. User can manually export by date range or the CRC program can continuously append the new postage data to an export file or database. Includes checks to prevent duplicate postage exports and can apply chargeback in numerous ways.

It is also capable of importing virtually any file type, and can be scheduled to automatically run one or more times a day. The user can run either process any time via desktop icons.

Supports import filtering for a multiple office environment to limit data for each work location.

CRC includes an extensive history log to quickly diagnose system status.
